Sergey Rushev

JUNIOR PHP DEVELOPER

Profile

I actually set up my career in the domain of front-end development, which eventually brought me into web design in software development companies. My professional responsibilities amounted to creating landing-page, dynamic web banners (HTML5, JS, CSS), video clips, illustrations and HTML coding.

Now that I understood the back-end development appeals to me more than front-end and design, I have made my mind to progress in this domain.

I am looking forward to finding a job in a well-established company with a developed onboarding procedure and a chance to learn from seasoned mentors.

If you need feedback, I'll be happy to provide contact details of my leads from previous jobs.
